Drilling Work Continues On Site

The drilling crew remobilized to the site and began removal and abandonment of the PVC sleeves that were installed in the first drilling mobilization. After PVC sleeve removals were complete, the crew proceeded to drill three more borings to collect additional data in the southwest step-out area and the eastern portion of Area 1. The GCPT rig also remobilized to the site to begin another row of step-out pushes in the southwestern RIM area outside the fence. EPA Region 7 received and reviewed the ORD memorandum that evaluated the PRP's evaluation of the potential effects of a Subsurface Oxidation Event on the Area 1 RIM. EPA Region 7 received from USGS the results of five off-site private well samples; radium and uranium results in all wells were below MCLs.

How You Can Be Involved

Attend EPA's public meeting on March --, 2014 at the ----- Event Center. Representatives from EPA and other agencies will provide information and be available to answer questions from the public.

Get involved in the CAG – EPA encourages the public to attend routine CAG meetings to stay informed.
